HISTORY

Late Shri R. C. Patel, founder of Patel Brass Works was one of the first entrepreneurs to set up manufacturing facilities at Rajkot.

Established in 1948 as a small foundry, PBW started its operations by producing castings for brass items. In 1953, a small workshop was added to manufacture brass buttons, tumblers and strainers. By 1965, PBW gained significant experience in casting and finishing of nonferrous components. Around this time, there was a need of developing critical components like bimetal bearings, which was identified by PBW then. Initially these were made for slow speed diesel engines. However in 1980, high grade precision bearings were introduced for high speed engines, compressors and earthmovers.

Around 1990 PBW ventured into export of critical engineering components for engines, compressors, pumps and purifiers, Earth Movers, Homogenizers etc.

PBW TODAY

PATEL BRASS WORKS PVT. LTD. is manufacturer of single metal/solid bronze bushings, bearings & thrust washers and also engaged in supply of various quality engineering components viz Liners, Pistons, Piston Rings, Valve Guide, Valve Seats, Valves, Rocker Arms, Crank Shafts, Sleeves, Cylinders etc., having an application in Compressors, Engines (Locomotive, Marine, Automotive, Power Generation, Mining), Pumps, Purifiers, Industrial Equipments and Oil & Gas Industry, with more than 2000 odd components already developed.

Components not in range can be developed based on drawing or samples (with reverse engineering capabilities). New product development is supported by in house "Product engineering" department.

Today, we successfully cater our products to the domestic and overseas market, mainly Canada, U.S.A., Latin America, Europe, Middle East and Far East, Asia etc.

QUALITY ASSURANCE

PBW being ISO 9001:2015 certified company maintains highest quality standards with regard to requirement of different parameters for various components. This is assured by our full-fledged in-house testing and measuring infrastructure.

In-house tool room facility has proven to be a strong support in developing jigs, fixtures and tooling to machine out critical parameter components and shorter lead time.

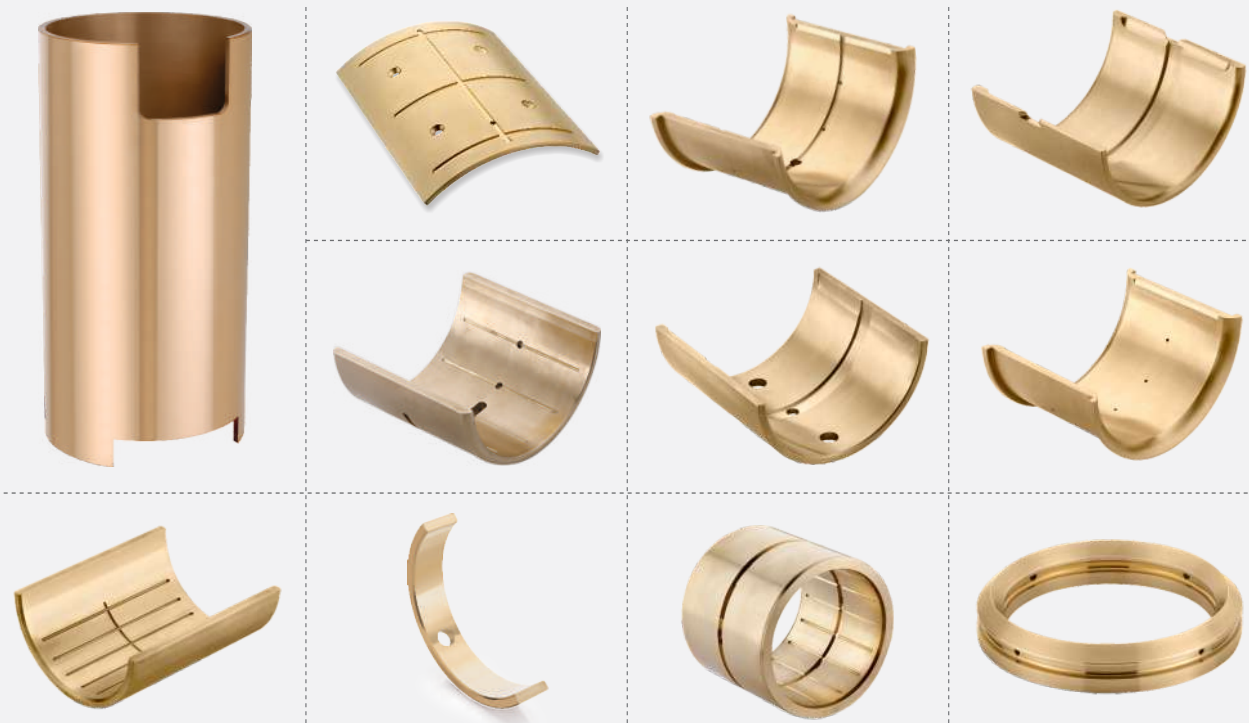

BRONZE PARTS

With decades of experience and state of the art infrastructure, PBW specialized in the field of single metal/solid bronze Bushings & Bearings, Washers etc. for various applications such as Engines (Locomotive, Marine, Automotive, Power Generation, Mining), Pumps, compressors, Industrial Equipment and Oil & Gas Industry etc.

Being one of the oldest well organized manufacturing company in the industry with the most modern machines tools, inspection & testing equipment available in-house, we successfully produce range of such bushings/bearings and are supplying globally.

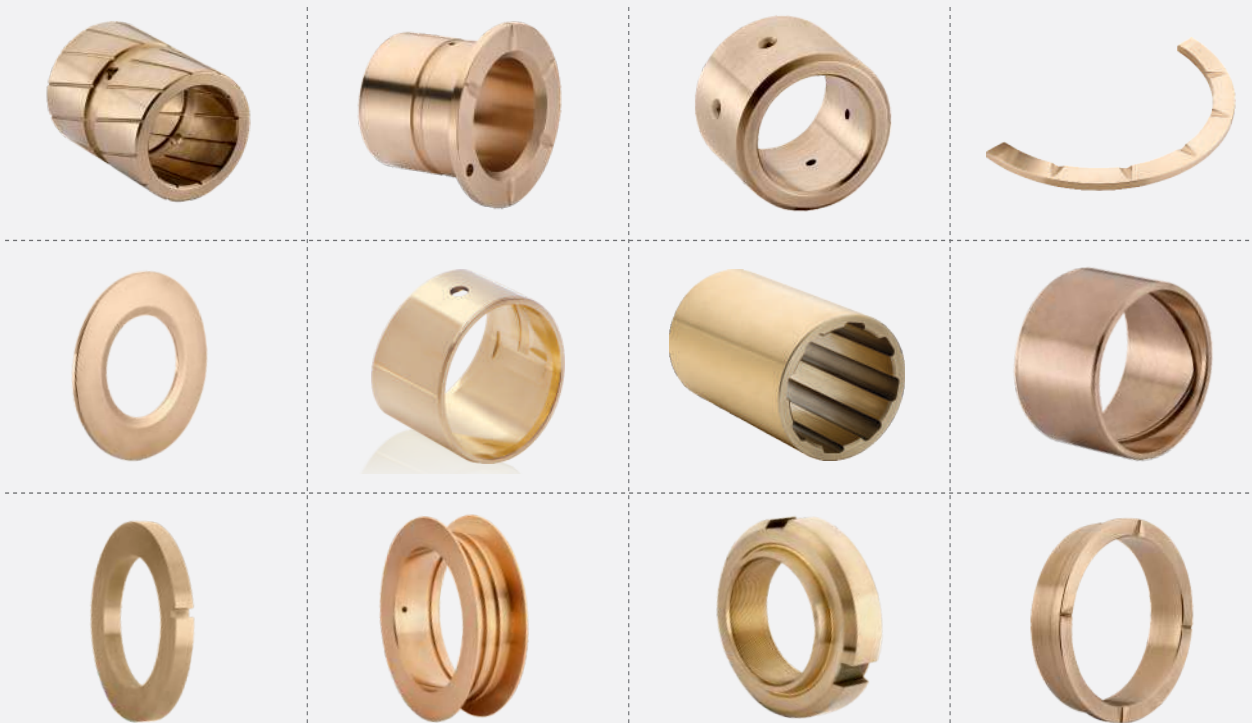

OIL & GAS

INDUSTRIAL EARTH MOVER, COMPRESSOR

RAILWAY, PUMPS, ENGINE

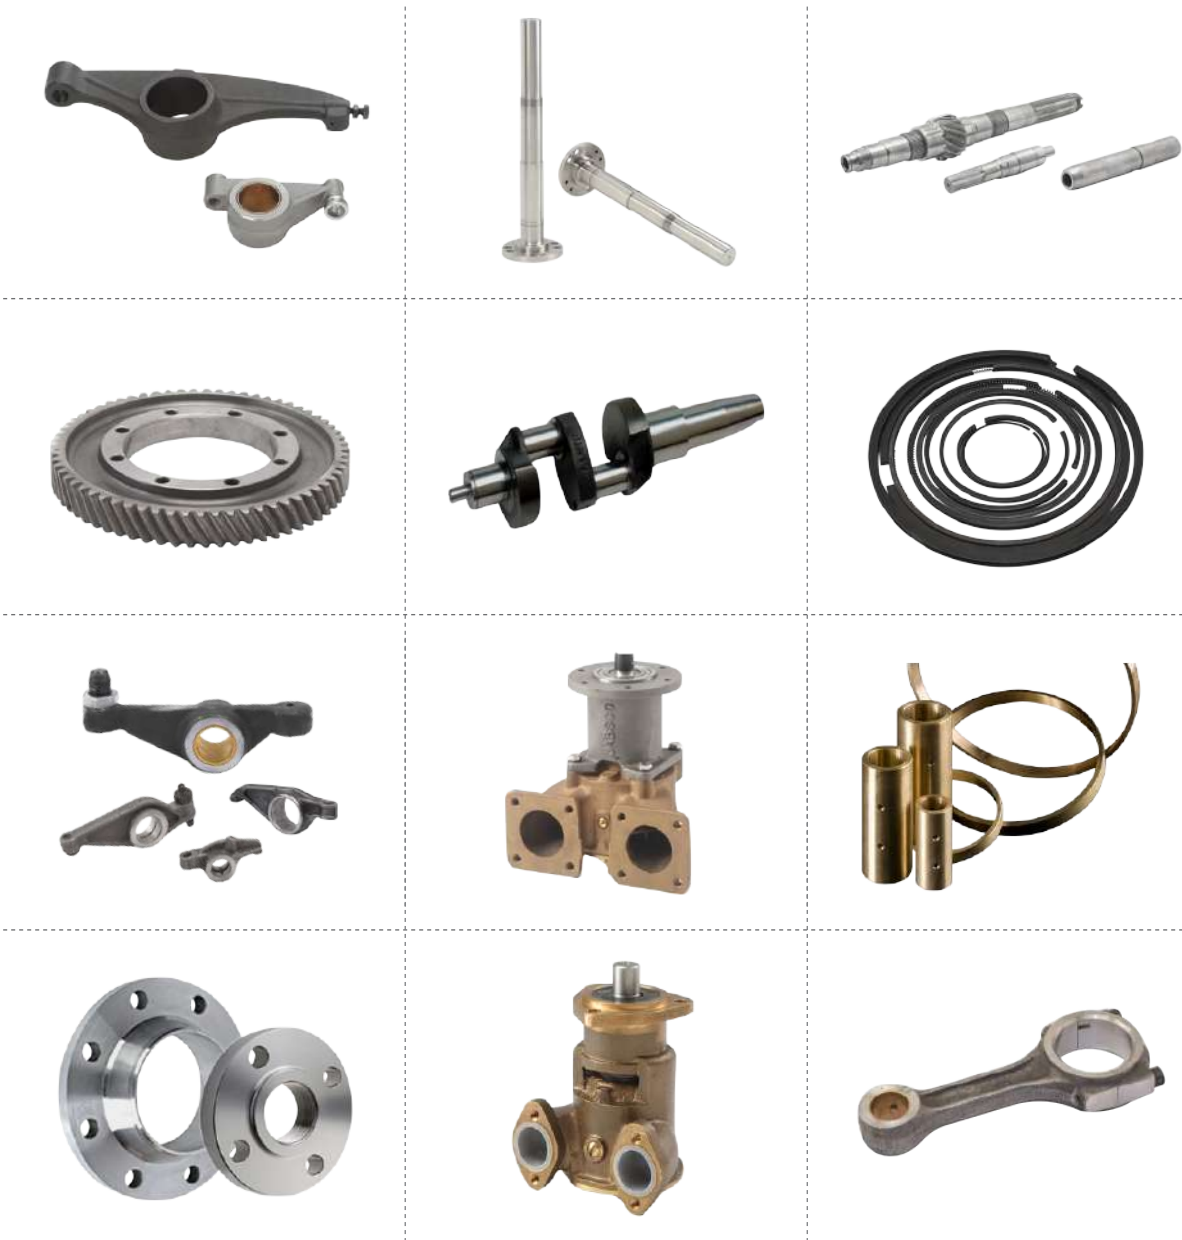

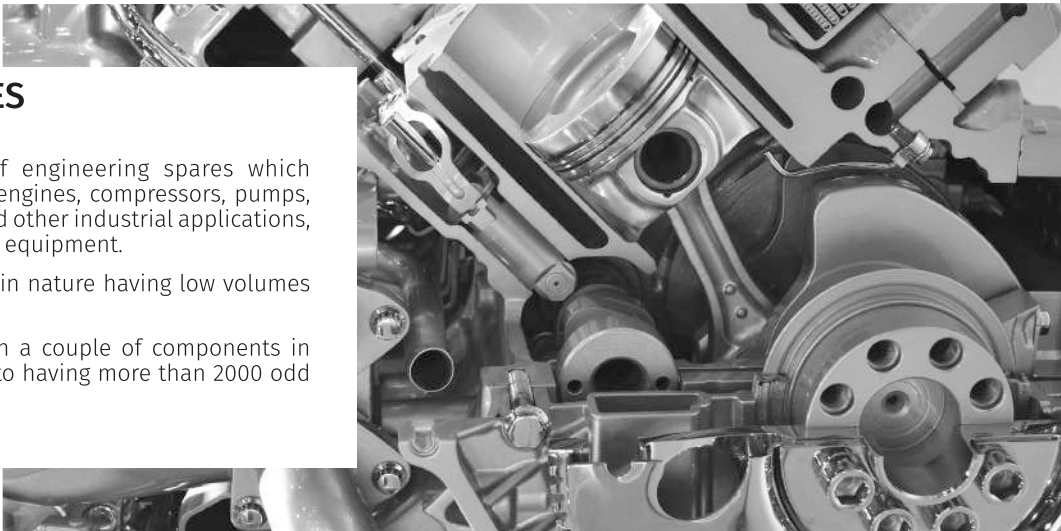

ENGINEERING SPARES

PBW specializes in export of engineering spares which comprises of components for engines, compressors, pumps, earthmovers, Homogenizers and other industrial applications, mainly for European & Japanese equipment.

These components are critical in nature having low volumes and not available easily.

The journey began merely with a couple of components in early 90's and has progressed to having more than 2000 odd components on hand.

ENGINES, PUMPS

RAILWAY, COMPRESSOR,
INDUSTRIAL
